Day CQ Mail Service Configuration:

Day CQ Mail Service

The mail service can be used to send emails.

SMTP server host name

The mailer uses this SMTP server to send messages (smtp.host)

SMTP server port

25

Port number to use to connect to the SMTP server (smtp.port)

SMTP user

The user for authentication through SMTP (smtp.user)

SMTP password

The password for authentication through SMTP. The password can either be provided plain text, or crypted via the Crypto Support feature (Main -> Crypto Support menu) (smtp.password)

"From" address

The email address to use in the "From:" field of messages sent by the mailer (from.address)

SMTP use SSL

☐

If enabled, an SSL connection is set up. (smtp.ssl)

SMTP use StartTLS

☐

If enabled, TLS connection is started. (smtp.starttls)

Debug email

☐

If enabled, interactions with the SMTP server are dumped to the operating system terminal that runs Sling (debug.email)

OAuth Flow

☐

If enabled, Interaction will use OAuth2 mechanism to send mails. (oauth.flow)

use TLS 1.2

☐

If enabled, TLS 1.2 will be used for sending mails. (use.tls12)

Configuration Information
