

v1.0.9 Changes

New config option for the path to the Generic List that has the metadata fields to be merged:

The screenshot shows a configuration window titled "BofA Merge Configuration". Below the title bar, it says "Configuration for Merge Settings in AEM". There are three main configuration fields:

- incomingChangesFolder**: Set to "5502". A tooltip below it says: "Temporary Incoming Content Fragment Folder, this will be appended to /var/merge (incomingChangesFolder)".
- outgoingChangesFolder**: Set to "4502". A tooltip below it says: "Temporary Outgoing Content Fragment Folder, this will be appended to /var/merge (outgoingChangesFolder)".
- metadataListPath**: Set to "/etc/acs-commons/lists/metadata". A tooltip below it says: "Path to the list of Metadata Fields to be merged (metadataListPath)".

Below these fields is a section titled "Configuration Information" with two rows:

- Persistent Identity (PID)**: com.adobe.aem.acs.bofa.core.services.impl.MergeConfigSe
- Configuration Binding**: Unbound or new configuration

At the bottom of the window, there is a partially visible text: "Child Nodes Health Check (com.adobe.granite.queries.simplifier.ChildNodesHealthCheck)".
